

Web Application Case Study

Task 4:

System Name: E-commerce Front-end Application

Used Tool: HTML, CSS and JavaScript

System Navigation Flow:

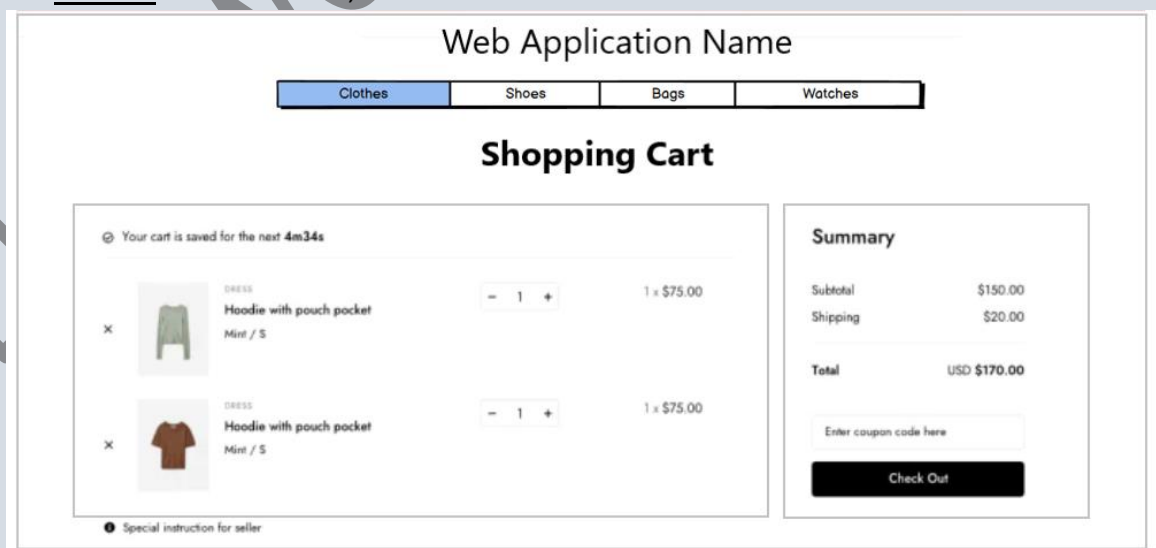

1. In the "Home Page", user can browse products in the application. There are four categories each category has two products per page. If the user clicked on "Buy Now" and **he is logged in already** he can open "Shopping Cart".
2. In the "Shopping Cart" Page, the user will find his order and its summary as the following Window:

System Description:

1. "Shopping Cart" Page:

This page is composed of four parts:

- Header: name of web application
- Navigation bar: navigate from category to another **using slider**.
- Body: Products information and it's summary, each one in distinct div **is a must**.
- Footer: write branches, contact and accounts information.

Task 5: Upload your project to your GitHub account.
